# Planter's Guide

*for*  
**THE SOUTHLAND**

**Wight Nursery & Orchard Co.**

**J. B. WIGHT, PROP.  
CAIRO, GEORGIA**

# My Aim Is to Sell Fruit Trees That Make Beautiful Orchards and Ornamental Plants That Make Beautiful Grounds

**I**T has long been our aim to grow the very best nursery stock that can be grown, then to sell it to our customers at a reasonable price. With us, quality comes first, price second. We do not claim to offer our plants at the lowest purchase price. We frankly admit that there are others who quote nursery stock lower than we do. But we do believe that our plants are the best that can be obtained, and that you will receive full value in anything you purchase from us. If this were not true our business would not have prospered during its forty-five years of existence.

We hope this catalogue will be of service to you. We have tried to accurately describe the plants listed, and to give their uses. We hope it will prove a true "Planter's Guide" to you—and naturally, we will be pleased if you can use some of the trees and plants described.

With this hope of being of service to you, we present our 1931-32 catalogue.

## WIGHT NURSERY and ORCHARD CO.

October 1, 1931.

AN INVITATION TO VISIT US—I'll tell you what you do—plan to visit our nurseries and see for yourself our fine pecan trees, other fruits and ornamental plants—then you'll understand why people buy from us year in and year out.

## It Is Easy to Order from Wight's

### READ BEFORE ORDERING

**WHEN TO PLANT**—Planting can be done any time the trees and bushes are dormant and the ground not frozen. In the South the best season for transplanting is usually from November 15th to April 1st.

**WHEN TO ORDER**—It is best to order early, as this enables us to reserve for you the varieties you want and avoids the possibility of our being sold out. The time of shipment may be left to us, as we keep track of weather conditions throughout the country and ship each order so as to reach our customers at the very best time for planting in that locality. If it is necessary that an order arrive on a certain date, please note it on your order sheet and we will ship to arrive as near to that date as possible.

**TERMS OF PAYMENT**—Cash with order, or satisfactory reference before shipment; or if preferred, will ship goods with Bill of Lading attached to Sight Draft, through express or bank. On all C. O. D. and Sight Draft Orders we require 25 per cent of the bill before shipment.

**PRICES**—All prices are net. We offer no premiums, discounts, or gratuities. Five trees or plants of a class will be billed at the 10 rate; 50 trees at the 100 rate; 500 at the 1,000 rate.

**POSTPAID SHIPMENTS.** All plants which can be wrapped in parcels so as to come within postal requirements as to length and breadth and weight have been quoted postpaid. This will prove an especially attractive feature to our

customers living some distance from Cairo. It eliminates altogether the question of what the plants will cost delivered to your door. Customers wishing the larger size plants may receive them, as before, by express collect. We especially recommend the small size plants to our customers west of the Mississippi. All plants not definitely stated Postpaid are quoted F. O. B. Cairo, Ga.

**HOW TO SEND MONEY**—An express money order, postal money order, or bank draft is the best form of remittance. You can send your personal check if you desire. It is not safe to send silver or bills except in a registered letter.

### OUR GUARANTEE

We guarantee our stock to be well grown, true to name, and properly handled and packed. Our responsibility ceases upon delivery to transportation company. All claims should be promptly made.

# AZALEAS and CAMELLIAS

Azaleas.

Azaleas and Camellias have been used for a number of years as hothouse plants in the East, and have been planted out-of-doors in the South for some time, but their real value as outdoor plants is just beginning to be appreciated. Azaleas or Camellias can be used in practically any location where other shrubs are used, giving the desired effect as evergreens, and at blooming time furnish a riot of color unsurpassed by any other group of plants. They should become more and more a part of every home planting. During blooming season, which for Camellias is from November until March, practically no other plants are in bloom. The lovely blossoms of Camellia would be outstanding at any season of the year, but the fact that they bloom during the winter months makes them even more desirable. Azaleas begin blooming in March and continue through April into May. They may be moved when in full bloom—in fact, at any season of the year.

**N**O Flowering Shrub is so outstanding, so surpassingly beautiful when in bloom as is azalea. Often practically all the leaves are hidden by the flowers in their riot of color—azaleas may be had in purple-pink, salmon pink, orange red, red flame, deep pink, red, white and light pink colors. There are a number of varieties of azaleas of different shadings of the same color, so that they offer a wider range of shades and colors than any flowering plant suited to the South. The blooming season may also be lengthened considerably by the selection of several varieties.

The Indian azaleas have the added advantage of being evergreen, so that even when they are not in flower their attractive foliage is an addition to any landscape. Azaleas can be grown successfully along the seacoast of the middle Atlantic states with a little protection to keep the bloom buds from being injured by cold—and very successfully along the coast from Charleston to South Central Florida and around the Gulf Coastal section to Texas without any protection whatever.

Azaleas are very easy to transplant and have few cultural requirements. Azalea roots like a cool soil, and should be planted in a partial shade, at least until the plants become large enough to shade their own roots. They may then be planted in full sun to advantage. Azaleas thrive in an acid soil. Where planted in a region in which the soil is alkali, it is advisable to dig out a good large hole and fill it in with

leaf mold or woods earth. The peaty muck found in and around old ponds is very desirable. Where this is not obtainable, or where azaleas have already been planted in an alkali soil, a small amount of aluminum sulphate, 1 pound to 30 square feet, will be found beneficial. Fertilize lightly about twice a year with cottonseed meal and tankage. Azaleas like a moist soil but it must be well drained.

Do not cultivate around azaleas. Their roots are right on the surface of the ground and any cultivation would be likely to cut a number of feed roots. If weeds appear, pull them up.

Azaleas may be used in almost any location where any other dwarf evergreen could be used. It is attractive in the foundation planting in front of the taller plants; in formal or informal beds, using colors which blend well; in hedges—in fact, anywhere where its beauty may be seen and appreciated.

## GROUP I

The faster growing varieties of Azalea Indica, generally characterized by large leaves, hairy underneath, and medium to large flowers.

**PHOENICIA.** Similar in form and habit of growth to Formosa, although with blossoms a little smaller than Formosa. Early. Sizes up to 24 inches only.

**FORMOSA.** The purple-pink variety so satisfactory in the Southern States. Large single flowers; leaves dark green. Very easy to grow and very vigorous. Sizes to 24 inches.

**VITATA FORTUNII.** A strong open growing Azalea; flowers very variable, changing from pure white with faint lavender stripes to a pale lavender. Sometimes a plant may produce flowers of only one color, or they may be mixed on the bush. Sizes up to 18 inches only.

### PRICES GROUP I

Size	Each	10
18 to 24 inch, B.&B.....	\$2.00	\$17.50
15 to 18 inch, B.&B.....	1.50	12.50
12 to 15 inch, B.&B.....	1.25	10.00
10 to 12 inch, B.&B., postpaid....	1.20	9.50
8 to 10 inch, B.&B., postpaid....	.95	9.00
6 to 8 inch, postpaid.....	.60	5.50

## GROUP II

Medium growers, generally more compact than Group I and therefore showier when in bloom. Leaves deep green color.

*Have your planting well planned*

## GROUP II—(Continued)

**AMOENA.** Hardy and very popular in the North; small hose-in-hose pink flowers, with shadings of purple; leaves small, dark lustrous green. Tall grower. At Cairo blooms in fall or early winter.

**BRILLIANT.** This variety has flowers of medium size of deep rose-pink. Blooms in mid-season. An excellent compact, bushy grower. Sizes to 12 inches.

**COCCINEA MAJOR.** Large flowers of orange-red color. Early. Sizes up to 12 inches only.

**DUC de ROHAN.** A free blooming, dense growing type of Azalea. Fine flowers of salmon color. Sizes up to 12 inches.

**ELEGANS.** A light clear pink with lustrous green leaves; its shadings are very delicate. Early bloomer and very desirable. Sizes to 24 inches only.

**FIELDERS WHITE.** The most satisfactory white azalea; has large blossoms of pure white. Bush vigorous, compact grower. Excellent for grouping with other colors. Sizes up to 18 inches only.

**GEORGE FRANC.** Unusually large flowers colored bright rose. One of the handsomest of all azaleas. Early. Sizes up to 12 inches only.

**GLORY OF SUNNINGHILL.** Large scarlet flowers with a shading of orange. Late. Sizes up to 12 inches only.

**IVERYANA.** White flowers striped with rose. Late. Sizes up to 12 inches only.

**MACRANTHA.** A lovely pink flowering azalea valuable for its deep luxuriant green foliage and for the fact that it flowers irregularly throughout the growing season. Sizes to 18 inches.

**PRIDE OF DORKING.** A rather slow growing variety of azalea which blossoms late in the season; flowers a very deep pink which is especially pleasing. Sizes to 18 inches only.

**PRINCE OF WALES.** A free flowering early variety of rose-red. Sizes up to 12 inches.

**RED FLAME.** A very brilliant red which flowers early in April. This is one of the most vigorous varieties, and may be seen at Magnolia Gardens the size of small trees. A most desirable plant. Sizes up to 15 inches.

Besides the above-named varieties we can supply Azalea India in the following colors: Deep Pink, and Late Deep Pink. Sizes up to 24 inches; salmon pink to 15 inches.

### PRICES GROUP II

8 to 10 inch, B.&B., postpaid	1.20	9.75
6 to 8 inch, postpaid.....	.75	7.00

## GROUP III

The slowest growing varieties of Azalea India, also selected varieties of Kurume Azaleas. The varieties constituting this group may be considered dwarfs. This group, although slow growing, is probably the most spectacular of the whole Azalea family when in bloom. Flowers generally are small, but produced in profusion.

**ITNODEGIRI.** A Kurume Azalea which is quite popular, and deservedly so. Foliage deep rich green; the plant is dwarf and very compact. When in bloom the foliage can hardly be seen

for the bright carmine flowers which cover the entire plant. An early bloomer which holds its blossoms for several weeks. A most satisfactory variety which we recommend heartily. Hardy at New York.

### PRICES GROUP III

## CAMELLIA JAPONICA

**CAMELLIA JAPONICA.** Long a favorite in old gardens of the South, is becoming more and more appreciated. The foliage is a dense lustrous green. It is hardy in the lower South, and because of the fact that it blooms in the winter when very few other plants are in blossom, it is always in demand. The flowers are delicately moulded, of waxy texture, and beautifully tinted, resembling a double full-blown rose.

**JAPONICAS,** as Camellias have long been known in the South, are easy to grow. They require a well-drained, somewhat shady location. An eastern or northern exposure is desirable. Camellias will thrive in an alkali soil, although they seem to do best in a soil which is slightly acid. Where Camellias are to be planted in full sun, it is wise to shade them for the first season.

We can supply one and two-year plants in red, dark-rose, shell-pink, deep pink, variegated, double white, early white and late white. All plants are double flowering. One-year plants from pots, postpaid \$1.15 each. Two-year plants from pots, postpaid \$1.75 each.

Shell Pink Camellia.

*A rear lawn provides an extra room to your house*

# ROSES

**S**OMEWHERE in every garden, on every home-grounds, there is a place for roses—the favorite of all. Through the generations these fragrant flowers have delighted young and old—symbolizing for all the romance and beauty of yesterday, today and tomorrow.

The versatility and numerous varieties of roses make it possible for you to grow just the rose you love. The climbing roses may be chosen to arch the trellis over the garden walk or to add beauty and charm to the open veranda, the wall or fence. Bush roses may be grown everywhere and anywhere about the garden and home-grounds, lending an atmosphere of cheer and graceful beauty that only roses can give.

The rose was a June flower in grandmother's day; now after years of experimentation, careful breeding and cultivation, these exquisite flowers brighten the entire summer with their profusion of color, their fragrance and charm. Throughout the growing season, roses may be had in a succession of bloom in shades to fascinate everyone.

## WHITE ROSES

**CLIMBING DEVONIENSIS.** An extremely vigorous climber, producing large, double, creamy white blossoms. Excellent in the South.

**REVE d' Or, Climber.** Lovely soft cream blossoms. Plant moderately vigorous. Has a long blooming season.

**WHITE COCHET.** The family traits and beauty of the Cochet family are preserved in this rose: white with edges of petals tipped rose. Among the best white tea roses.

**WHITE AMERICAN BEAUTY** (Frau Karl Druschki) H. P. The regal "White American Beauty." The distinctive form and expression of its bud, half opened state, and maturity, are a three-fold revelation of exquisite charm and beauty. Large flowers of waxy paper white in June; yielding their final outburst with the first signs of fall.

**KAISERIN AUGUSTA VICTORIA.** T. Another excellent pure white rose which does especially well in the lower South. Free and regular bloomer; large blossoms.

**SILVER MOON.** Hardy Climber. Snow white, producing large nearly single blossoms. Very vigorous to 30 feet or more.

**WHITE KILLARNEY.** Sport of the well-known Killarney. Very beautiful in bud; quite satisfactory rose.

### PRICES—ROSES, ALL VARIETIES

Size	Each	10
2-year, budded, postpaid.....	\$ .60	\$5.50

## YELLOW ROSES

We are listing here the best Yellow Roses for Southern gardens. Although there are a great many varieties of yellow roses, the number which will succeed in the South is quite limited. We therefore are listing only those which we know absolutely will give satisfaction.

**LADY HILLINGDON.** T. Apricot-yellow, especially beautiful in the bud; free bloomer, strong grower.

**LUXEMBOURG.** H. T. One of the very best yellows of the new hybrid teas. A deep golden yellow, very attractive both in its pointed bud and as an open flower.

**MARECHAL NEIL.** Climber. An old favorite which needs no description.

**SUNBURST.** H. T. A most excellent yellow rose; blossom deep yellow with shadings of orange; buds long and pointed. One of the most striking roses suitable for Southern gardens.

### PRICES—ROSES, ALL VARIETIES

Size	Each	10
2-year, budded, postpaid.....	\$ .60	\$5.50

*Wight-grown means grown right*

## PINK ROSES

**ANTOINETTE REVOIR.** H.T. A vigorous grower and bloomer, and one of the most desirable light shell-pink roses.

**SHELL PINK RADIANCE.** (Mrs. Charles Bell). H.T. Soft-pink with a salmon back-ground. It retains its full globular shape an unusually long period.

**PINK RADIANCE.** H.T. Extra hardy, vigorous and prolific; one of the best all-around Garden Roses. Its color is a beautiful blending of carmine-rose with shades of opal and copper.

**PAUL NEYRON.** H.P. One of the best hardy roses ever grown. It blooms intermittently from June to November, on long, smooth, thornless stems, furnishing a vast quantity of uniform flowers 4 to 6 inches across. Color a bright ruddy pink. Particularly good in Autumn.

**KILLARNEY QUEEN.** H.T. Produces excellent, long, brilliant pink flowers. More vigorous than Killarney.

**MAMAN COCHET.** Mother of many noted favorites, establishing a type as well known and appreciated as any group in the Tea section. The color is rich, clear pink daintly flushed with silvery rose.

**CLIMBING PINK COCHET.** A strong climber. Flowers are color and size of bush Maman Cochet.

**MADAME BUTTERFLY.** H.T. Light shaded pink and yellow. A very richly colored blossom.

**COLUMBIA.** H.T. Rose-pink, large, double. Shadings of pink become slightly deeper as bud opens.

**WILLOWMERE.** H.T. Salmon and shell-pink, with a slight shading of yellow. An excellent flower worthy of being in every garden. This rose is largely taking the place of the over-rated Los Angeles.

### PRICES—ROSES, ALL VARIETIES

Size	Each	10
2 year, budded, postpaid.....	\$ .60	\$5.50

## RED ROSES

**FRANCES SCOTT KEY.** H.T. Crimson; very large and full blooms, exceptionally good in the South.

Luxembourg.

Lady Hillingdon.

**RED RADIANCE.** H.T. The globular, heavy-stemmed "Radiance" duplicated in all respects except color; this sport form being a brilliant crimson.

**REINE MARIE HENRIETTE.** Climber. ("Red Gloire de Dijon.") Fragrant cherry-red flowers. The plant is vigorous and has a strong climbing habit of growth. Super-abundant bloom early in the season.

**ETOILE DE FRANCE.** H.T. Blossoms a dark, velvety red, good shape and substance. The best deep red for the lower South.

**GRUSS AN TEPLITZ.** A shrub rose, very fragrant, with blossom a brilliant velvety crimson. A vigorous grower and bloomer.

**LOUIS PHILIPPE.** (Bengal.) Especially adapted for use as a hedge, this lovely rose has small deep crimson blossoms in great profusion in the Spring and Fall.

**PAUL'S SCARLET CLIMBER.** One of the most popular hardy climbers. Large, double, vivid scarlet blossoms produced somewhat in clusters.

### PRICES—ROSES, ALL VARIETIES

Size	Each	10
2 year, budded, postpaid.....	\$ .60	\$5.50

## EXPLANATION:

The letter following each rose denotes the class or origin to which it belongs: (C.L.) Climbing, (T) Tea, (H.T.) Hybrid Tea, (P) Perpetual, (H.P.) Hybrid Perpetual, (N.) Noisette, (W.) Wichuriana, (H.W.) Hybrid Wichuriana, (Pol.) Polyantha.

Budded, field grown.

Note: All roses are cut back for convenience in packing and shipping.

..... "I believe if a person once has one plant from your place they'll never buy a rose plant any place else. They just do not compare with the ones I've had from other nurseries."—Mrs. T. A. Barrow, Pelham, Ga.

Roses are easy to grow

# BROAD-LEAVED EVERGREENS

THE South is indeed fortunate in the wealth of broad-leaved evergreens which flourish in practically all sections of it. The broad-leaved evergreens are different from the coniferous evergreens in that their leaves are large and glossy. Many of the broad-leaved evergreens have beautiful blooms and berries—a distinct advantage over the conifers. With the use of broad-leaved material one is able to get definite contrasts in color and size of foliage; blossoms over long periods; low growing or tall growing plants as the location demands—in fact, broad-leaved evergreens have all the advantages of conifers without their disadvantages.

There is a distinct tendency on the part of planters in the South to use more Broad-Leaved Evergreens where they formerly used Coniferous Evergreens. Many of the Broad-Leaved Evergreens bloom and are a source of great satisfaction at blooming time. The bloom-

ing season can, by proper selection, be lengthened over a period of several months from spring until midsummer. There are Broad-Leaved Evergreens for every type of planting—tall columnar ones for planting where height is desired, broad symmetrical ones which can be used for places of medium height—in fact, there is some Broad-Leaved Evergreen which will fit any required place. The group as a whole has the added advantage of standing pruning exceptionally well, so that they may be kept under control, and not allowed to become too large.

The Broad-Leaved Evergreens are also excellent for the shrub border, for screening out undesirable views, and for use as specimen plants. There is not a more versatile group. You will find listed below plants of every type and habit to fill any requirements you may have in your planting.

## ABELIA

**ABELIA GRANDIFLORA.** Succeeding over a very wide range of climatic and soil conditions, in sun and in shade, this beautiful evergreen is probably the most satisfactory of the broad-leaved group. An excellent plant for hedge work. Although a very vigorous grower, it will stand any amount of pruning. A hardy evergreen with glossy, dark green foliage. Has profusion of white funnel-shaped flowers, tinted with pink, borne in clusters from May until late autumn. Valuable for foundation planting, grouping on the lawn, etc.

Glossy Abelia

## BANANA SHRUB

**MICHELIA FUSCATA.** With deep rich green leaves and blossoms of the odor characteristic of bananas, the Banana Shrub has long been a favorite in the South. Ultimate height about 15 feet. Comparatively slow grower.

Size	Each
12 to 18 inch, field grown plants, postpaid.....	\$2.00
5-inch pots, postpaid.....	1.50
4-inch pots, postpaid.....	1.00

## BOXWOOD

**BUXUS SUFFRUTICOSA.** Truedwarf box. Leaves small, rounded; deep lustrous green; very slow grower; excellent for edging beds and walks. In the lower South should be planted in two-thirds shade.

Size	Each
12 to 15 inches, postpaid.....	\$2.00
10 to 12 inches, postpaid.....	1.50

## CAMPHOR

**CINNAMOMUM CAMPHORA.** This is an unusually attractive evergreen with bright, evergreen foliage. It is seldom that one finds a tree or shrub which provides such beautiful color changes. The new growth is a wine color

which changes to various other tones until it reaches a dark, glistening green. In fall the older leaves turn a bright red. If allowed to develop naturally will make a broadly rounded cone, branching clear to the ground. Foliage compact. Suitable for windbreaks, hedges or screens. Hardy in the South.

### PRICES

Size	Each	10
3 to 4 feet, postpaid.....	\$1.50	\$12.50
2 to 3 feet, postpaid.....	1.00	9.00

## CHERRY LAUREL

**LAUROCERASUS CAROLINIANA.** Excellent for screen, as it is a fast growing, erect evergreen; also for formal work, since the cherry laurel stands pruning especially well. Leaves large, deep green, bright and shiny. Grows to a height of around 30 feet when mature.

### PRICES

Size	Each	10
4 to 5 ft., B.&B.....	\$2.50	\$22.50

12 to 18 in., B.&B.....	.75	7.00

*Wight-grown evergreens grow better*

## CLEYERA

**CLEYERA JAPONICA.** An excellent evergreen with thick waxy leaves and creamy white fragrant blossoms. Well covered with red berries in winter. A slow grower with an ultimate height of 10 to 12 feet.

Size	Each
18 to 24 inches.....	\$1.75
15 to 18 inches.....	1.25
12 to 15 inches, postpaid.....	1.00

## COTONEASTER

**COTONEASTER PANNOSA.** A handsome evergreen shrub with graceful, slightly drooping branches. Leaves gray green on top, silvery underneath. Ultimate height 6 feet. Great masses of dull red berries, which remain all fall and winter, follow its white blossoms in spring.

Size	Each
3 to 4 feet .....	\$2.00
2 to 3 feet .....	1.50

## ELEAGNUS

**ELEAGNUS SIMONI.** Of same habit of growth as *Eleagnus pungens*, but having rather large silvery gray leaves, with few brown scales beneath. By pruning can easily be kept formal. Quite desirable in the lower South.

Size	Each
2 to 3 feet .....	\$1.50
18 to 24 in, postpaid .....	1.00

## GARDENIA FLORIDA

**GARDENIA!** The epitome of immortal flowers. All the romance of the flower world is garnered in the conception of its exquisite snow-white, wax-like petals, its glazed dark-green foliage and its perfume, which literally permeates the air. Gardenias add that all-important finishing touch to your garden, your home, and your costume. Can you afford to be without them? 2-3 ft., \$1.25 each; 1½-2 ft., \$1.00 each.

## JASMINE

**JASMINUM PRIMULINUM.** A graceful drooping evergreen with dark green leaves. Produces large yellow flowers in early Spring. 1-year plants, field grown, postpaid 70c each.

Japanese Privet.

*Abelia is becoming a popular hedge*

## LIGUSTRUM

**LIGUSTRUM OVALIFOLIUM.** (California Privet.) Being of stiff habit of growth, this plant makes a very desirable hedge and is much used for this purpose. Small dark green leaves. Stands shearing well and can be sheared to any desired shape. Ultimate height, if un-sheared, 15 feet. 3 to 4 feet 50c each, \$4.50 per ten.

**LIGUSTRUM OVALIFOLIUM VARIEGATA.** An excellent strong growing shrub with variegated leaves. Grows to a height of 12 to 15 feet. Will stand severe pruning, however, and can be kept at any desired height.

### PRICES

Size	Each
2 to 3 feet, B.&B.....	\$1.00

15 to 18 inch, B.&B., postpaid.....	.60
8 to 12 inch, from beds, postpaid.....	.35

**LIGUSTRUM IWATA.** A comparatively new evergreen privet having glossy green leaves with light center. Of very compact habit, this plant is desirable in any foundation planting, as well as the shrub border, or for screening. Ultimate height, about 10 feet. 12 to 18-inch size only. Prices same as *Ligustrum Japonicum*.

**LIGUSTRUM LUCIDUM.\*** An excellent tall growing evergreen, especially suited for corners and for screening. Can be grown into a small tree. Has large, deep green leaves, white flowers in panicles which are followed by attractive purple berries. (See footnote.)

### PRICES

Size	Each
6 to 8 feet, bare root.....	\$2.00
5 to 6 feet, bare root.....	1.75
4 to 5 feet, bare root.....	1.50
3 to 4 feet, bare root.....	1.00
2 to 3 feet, bare root.....	.50

Balled and burlapped, add 50 per cent to the above prices.

**LIGUSTRUM JAPONICUM.\*** Among the best *Ligustrums*. Deep, glossy green leaves, slightly smaller than *L. Lucidum*. This plant is a very compact, symmetrical grower, and does well either in shade or sun. Early in May it has panicles of white flowers, which are followed by large clusters of black berries. The berries remain throughout the winter. An excellent plant for grouping and foundation planting. Stands pruning well. Ultimate height, 15 to 20 feet.

**\*LIGUSTRUM JAPONICUM and LIGUSTRUM LUCIDUM** have so often and for so long been confused by many growers that we are reproducing herewith from L. H. BAILEY'S "CYCLOPEDIA OF HORTICULTURE," the true and correct description of these plants. It will be noted that we have formerly, and many growers are still listing the two varieties incorrectly—selling *Lig. Jap.* under the name *Lig. Luc.* and vice-versa.

**"LIGUSTRUM JAPONICUM, Thunb. (L. Glabrum, Hort. L. Kellerianum, Vis. L. Kellermannii, L. Sieboldii, L. Spicatum and L. Syringae florum, Hort.)** Bushy shrub, to 10 feet; leaves roundish ovate to ovate-oblong, acute or obtusish, with reddish margin and midrib, veins beneath, not distinctly marked, 2 to 3¼ inches long; panicles broad, rather loose, to 4½ inches long; corolla-tube usually somewhat longer than calyx. July, Aug. Japan—Very handsome evergreen shrub, but in colder climates often losing the leaves in the Fall; often confounded with the following: (*L. Lucidum*), and also with the preceding (*L. Ovalifolium*)."

**"LIGUSTRUM LUCIDUM, Ait.** (L. Japonicum macrophyllum, L. Maglioliaefolium, L. Sinense latifolium robustum, and L. spicatum, Hort.) Large shrub or tree, to 20 feet, with somewhat spreading branches, similar to the former (L. Jap.); leaves larger, ovate to ovate-lanceolate, acute or acuminate, distinctly veined beneath, 3 to 5 inches long; panicles less loose, with almost sessile flowers; tube about as long as calyx. July, Aug. Japan, China—larger leaved than the former, but more tender."

## NANDINA

**NANDINA DOMESTICA.** (Heavenly Bamboo.) A most striking plant in fall and winter, when the normally green leaves turn a deep crimson. Mature plants have large clusters of brilliant scarlet berries which hang on well after Christmas. A beautiful upright growing shrub, doing well in either sun or shade. Particularly desirable when planted in front of green foliaged plants.

## PHOTINIA

**PHOTINIA GLABRA.** The young leaves are a brilliant scarlet, gradually turning to green. The plant is covered from spring until fall with enough young growth to give the whole plant a decided scarlet color. Flowers quite large.

### PRICES

Size	Each
18 to 24 inches B.&B.	\$1.25
12 to 18 inches B.&B.	.90

**PHOTINIA SERRULATA.** Very desirable for foundation planting or the shrub border. Its large corymbs of white flowers are outstanding in the spring. In the fall much of its foliage takes on varying hues of red. Our particular strain has ruffled, holly-like leaves which are unusually attractive.

### PRICES

4 to 5 feet B.&B.	\$2.00
3 to 4 feet B.&B.	1.50
2 to 3 feet B.&B.	1.00
18 to 24 inches	.75

## PITTOSPORUM

**PITTOSPORUM TOBIRA.** The medium size, rounded, dark green leaves of this variety of Pittosporum are lovely. Produces small inconspicuous, cream colored flowers, delightfully fragrant. A fast growing shrub which stands shearing well. Much used in foundation planting.

### PRICES

Size	Each
15 to 18 inch B.&B.	\$1.50
12 to 15 inch B.&B.	1.00
10 to 12 inch B.&B., postpaid	.90
4-inch pots, postpaid	.75

**VARIEGATED PITTOSPORUM.** (Pittosporum Tobira Variegatum). Similar in habit of growth to above variety, but with light green leaves variegated with white. Excellent in the North as a house plant. Planted extensively out of doors in the lower South.

### PRICES

Size	Each
4-inch pots, 10 to 12 inch, postpaid	\$ .75

## PYRACANTHA

**PYRACANTHA.** Commonly called Fire Thorn. The Pyracanthas are outstandingly beautiful in the fall and winter when literally covered with bright colored berries. It may be had in several varieties, depending on the color of fruit and habit desired in the plant.

**PYRACANTHA CRENULATA.** Leaves narrow, leathery bright green; fruit bright orange-red. Hangs on during the winter and are attractive to birds.

**PYRACANTHA FORMOSANA.** One of the most thrifty Pyracanthas. Compact, fast growing, with small holly-like leaves and red berries formed in enormous clusters in late summer and hang on during the winter. Ultimate height 15 feet.

**PYRACANTHA YUXNANENSIS.** Of a lower, more spreading habit than P. Formosana. Leaves larger, being 2 to 3 inches long. Berries bright coral-red, small. One of the most satisfactory Pyracanthas.

### PRICES—ALL PYRACANTHAS

Size	Each
5-inch pots, postpaid	\$ .75

## TEA OLIVE

**OSMANTHUS FRAGRANS.** A large growing shrub having glossy foliage and producing small white flowers, valuable for their delightful fragrance. Long blooming period. Attains a height of about 20 feet. Should have partial shade when starting.

### PRICES

Size	Each
2 to 3 feet, boxed	\$2.50
18 to 24 inches, field grown	2.00

## TEA PLANT

**THEA BOHEA.** The leaves of this plant are used for making the tea of commerce. A beautiful low growing winter blooming shrub which produces attractive white flowers. Dark green foliage, dense, and stands shearing well.

### PRICES

Size	Each
15 to 18 inch, bushy, postpaid	\$1.25

## VIBURNUM

**VIBURNUM ODORATISSIMUM.** (Sweet Viburnum.) An evergreen shrub succeeding all over the lower South. Leaves large and glossy green. Fragrant white flowers appear in the late Spring. Attains a height of 8 to 10 feet. Good in partial shade.

**VIBURNUM JAPONICUM.** (V. Macrophyllum). Recently introduced from California, this plant is proving very valuable in the lower South. Of about the same hardiness as V. Odoratissimum. Of dwarf growth, leaves thick, heavy dark green. Very compact. Excellent for foundation planting. Maximum height about 6 feet.

**VIBURNUM SUSPENSUM.** (Sandankwa Viburnum). Of spreading habit, this shrub has large dark green leaves with ruffled edges. Fragrant cream-colored flowers borne in profusion. Stands shearing well and can be kept as low as desired, although its ultimate height is only about 8 to 10 feet.

### PRICES ABOVE THREE VARIETIES

Size	Each
2 to 3 feet	\$2.50
18 to 24 in., B.&B.	1.50
15 to 18 in., B.&B.	1.25
12 to 15 in., B.&B.	1.00
6 to 12 in., from beds, postpaid	.50

**VIBURNUM TINUS.** An upright growing, columnar evergreen, much used in locations requiring height without much spread at the base. The foliage is small and of deep green color. Cream colored blossoms are quite attractive. Of comparatively slow growth.

### PRICES

Size	Each
12 to 15 inches, postpaid	\$1.50
10 to 12 inches, postpaid	1.25
8 to 10 inches, postpaid	.90

Let us landscape your home grounds

# CONIFEROUS EVERGREENS

Wherever formality and dignity are required in the garden nothing serves quite so well as to do the Coniferous Evergreens. The tall stately Cedrus Deodara is a source of joy and admiration wherever it is seen. It is especially good as a specimen on the lawn. The Oriental Arborvitae may be used as specimens also, and are excellent as screens. Berckman's Golden Arborvitae is a favorite for planting around entrances, or wherever low Pyramidal Arborvitae are required. Pfitzer Juniper is becoming more popular each year for use in front of upright growing plants. Pfitzer Juniper has a delightful habit of spreading close to the ground. These are but a few of the Conifers which will give you great pleasure in your garden. They are more accurately described below.

## ARBORVITAE

**AMERICAN ARBORVITAE** (Thuja Occidentalis.) An erect form of arborvitae, adapted to a wide range of soils and conditions. Does not burn out in the South like some varieties. Ultimate height 15 to 20 feet.

Size	Each
2 to 3 feet, B.&B. ....	\$1.50
18 to 24 inch, B.&B. ....	1.25
12 to 18 inch, B.&B. ....	1.00

**BAKER'S ARBORVITAE.** (Thuja Orientalis Bakers). A tall pyramidal arborvitae with bright green foliage. The deep green color is retained both winter and summer. 6 to 8 inch, postpaid 80c each.

**BERCKMAN'S GOLDEN ARBORVITAE** (Thuja Orientalis Aurea Nana). One of the best-known and most desirable dwarf arborvitae. Compact and symmetrical. Leaves are deep green, with golden tinted tips.

Size	Each
15 to 18 in, B.&B. ....	\$2.00
10 to 12 inch, B.&B., postpaid.....	1.25
8 to 10 inch, postpaid .....	1.00
6 to 8 inch, postpaid .....	.75

**BLUE GREEN ARBORVITAE.** (Thuja Orientalis Glauca). Closely resembles the Rosedale Arborvitae, but has a slightly deeper blue green color. Very satisfactory in the South.

Size	Each
2 to 3 feet.....	\$2.50
18 to 24 inch, postpaid.....	2.00
12 to 18 inch, postpaid.....	1.50

**BONITA ARBORVITAE.** (Thuja Orientalis Bonita). A compact, dwarf, cone-shaped arborvitae with attractive deep green foliage; a little broader at the base than Berckman's Golden Arborvitae.

Size	Each
12 to 15 inch, postpaid.....	\$2.00
8 to 12 inch, postpaid.....	1.50

**GLOBE ARBORVITAE** (Biota Globosa). A dwarf arborvitae which gets its name from the fact that it grows in the shape of a globe. Dense, dark green foliage which turns bronze in the winter. Desirable for foundation planting in front of other evergreens, and for pots or tubs.

Size	Each
2 to 3 feet spread, B.&B.....	\$3.50
18 to 24 inch spread, B.&B.....	2.50

**ORIENTAL ARBORVITAE** (Thuja Orientalis). Seedlings. Tall, loose growing types, growing to make large trees. Broad at the base, pyramidal. Beautiful dark green foliage. Will stand shearing well. Sometimes used for hedges, often for screening and windbreaks.

### "How to Plant the Home Grounds"

A new booklet, edited by "Chinese" (E. H.) Wilson, famous plant explorer and horticulturist of the Arnold Arboretum, is ready for distribution to our customers desiring it. The booklet pictures and describes the modern trend in beautifying home grounds, and is an excellent guide to modern planters.

**PYRAMIDAL ARBORVITAE.** (Thuja Orientalis Pyramidalis). Selected seedlings true to type. Not so spreading as T. Orientalis. Probably the South's best coniferous evergreen. Blue green foliage; grows tall, stately.

### PRICES ABOVE TWO VARIETIES

Size	Each
6 to 8 feet, B.&B. ....	\$3.50
5 to 6 feet, B.&B. ....	2.50
4 to 5 feet, B.&B. ....	2.00
3 to 4 feet, B.&B. ....	1.50
18 to 24 inch, B.&B. ....	1.00

**THUJA ROSEDALE.** Leaves a rich blue-green color, which is very pleasing. A fast-growing plant which is quite satisfactory in the smaller sizes. Excellent where an immediate formal effect is desired at a moderate cost.

### PRICES

Size	Each
12 to 18 inches, B.&B., postpaid.....	\$1.50
10 to 12 inches, B.&B., postpaid.....	1.00
8 to 10 inches, postpaid.....	.75

For Southern gardens plant Wight-grown evergreens

# ORNAMENTAL TREES

## CHINESE ELM

(**ULMUS PUMILA**). This fast growing shade tree is being very widely planted all over the country, due to the fact that it adapts itself well to extremes of heat, and cold, drought, and alkali soils. Almost sure to succeed wherever planted.

### PRICES

Size	Each
10 to 12 feet.....	\$1.75
8 to 10 feet.....	1.25
6 to 8 feet.....	1.00
4 to 5 feet, postpaid.....	.75
3 to 4 feet, postpaid.....	.60

**LOQUAT** (*Eriobotrya Japonica*). A shrub or small tree having large deep green leaves. Hardy out doors south of Charleston, and excellent for a house plant anywhere in the United States. In very mild climates produces delicious yellow edible fruit; grown largely for its handsome foliage.

### PRICES

Size	Each
2 to 3 feet, field grown .....	\$1.50

**MAGNOLIA GRANDIFLORA**. The native Magnolia so popular in the South. Large deep green, lustrous leaves which are evergreen;

large white flowers blooming from April through August. Ultimate height, 50 to 75 feet. A most desirable tree, either for specimen or group planting.

### PRICES

Size	Each
5 to 6 feet.....	\$3.00
4 to 5 feet.....	2.50
3 to 4 feet.....	2.00

**JAPANESE MAGNOLIA** (*Magnolia Soulangeana Purpurea*). One of our most magnificent shrubs or small trees. Deciduous; in March, before the leaves appear, it is covered with large cup-shaped purple flowers which last for several weeks. Exquisite as a specimen plant or in the shrub border. Grows to 25 feet.

### PRICES

Size	Each
2 to 3 feet, postpaid.....	\$3.50
1½ to 2 feet, postpaid.....	2.75

**MIMOSA**. Very attractive low growing tree with fine, feathery foliage. Pinkish flowers borne in great masses at the end of the branches in May. Holds blossoms several weeks. An excellent specimen subject.

### PRICE

Size	Each
6 to 8 feet.....	\$1.75

## WEeping Willow

**SALIX BABYLONICA**. The large spreading top and long, drooping branches of Weeping Willow makes it very picturesque. It thrives in wet or dry soils.

### PRICES

4 to 5 feet, postpaid.....	\$1.00
3 to 4 feet, postpaid.....	.75
2 to 3 feet, postpaid.....	.50

**RED BUD** (*Cercis Canadensis*). Very spectacular in early spring, before the leaves appear, when the tree is covered with a mass of reddish-purple flowers. Fast growing, well shaped tree with large heart-shaped leaves.

### PRICES

Size	Each
4 to 5 feet.....	1.00
3 to 4 feet.....	.75
2 to 3 feet.....	.50

**SYCAMORE**. Well known in the South, where it is often used for street planting. Fast growing, symmetrical. Attractive bronze-green leaves.

### PRICES

Size	Each
8 to 10 feet.....	\$2.50

**DOGWOOD** (*Cornus Florida*). The surest sign of spring in the South is the blossoming of the lovely dogwood. Striking in the fall with its many-colored Autumn leaves and red berries. Altogether the most desirable flowering tree. Our nursery-grown trees have far better root system than woods-grown trees and will give better results.

### PRICES

Size	Each
4 to 5 feet.....	1.75
3 to 4 feet.....	\$1.25

Japanese Magnolia

Plan to plant another tree

# ORNAMENTAL FLOWERING SHRUBS

**FLOWERING SHRUBS.** Color has invaded every part of the home, some parts of which were once dull and drab. But color has always been a prominent factor in the flower garden. With the ever increasing popularity of the outdoor living room, the flowering shrubs have again come into their own. The general scheme is to use the Broad-Leaved Evergreen for the back-ground and for screening out undesirable views, and to depend largely on our excellent flowering shrubs to give the succession of vivid colors which make the shrub border of the outdoor living room always a place of joy and beauty. Pearl Bush, Golden Bell and Thunbergi Spiraea are among the first to open their lovely blossoms to welcome spring. Flowering Peach, the Bush Honeysuckle and Spiraea Van Houttei follow close on their heels. The delightful fragrance of Bush Honeysuckle and the dainty pink and deep red of Flowering Peach, make late spring one of the most delightful times in the garden. As the earlier spring flowering blossoms begin to disappear Deutzia comes along with a profusion of dainty, pinkish white blossoms.

When summer becomes hot and sultry, and most annuals and perennials are gone, the shrub border would become quite drab and uninteresting were it not for Althea and Crape Myrtle. Althea may be had in double white, double purple or the loveliest of shell pink. It seems to

rival Crape Myrtle in the length of the blooming season. The popular dwarf red Crape Myrtle is practically indispensable at this season of the year.

Don't miss the joys of these flowering plants in your garden. All are inexpensive and at home in practically any soil.

**ALTHEA** (*Hybiscus Syriacus*). A free blooming late summer shrub; upright. Ultimate height 8 to 10 feet. Colors: Double White, Double Purple, Shell Pink.

## PRICES

Size	Each
3 to 4 feet .....	\$ .60
2 to 3 feet, postpaid .....	.50
18 to 24 inches, postpaid .....	.40

**BUTTERFLY BUSH** (*Buddlea*). The long racemes of violet blossoms are especially attractive to butterflies. Blooms from June until frost.

## PRICE

Size	Each
2 to 3 feet, postpaid .....	\$.50

**CRAPE MYRTLE** (*Lagerstroemia Indica*). This truly Southern shrub is not used as much as its beauty deserves. Excellent in the shrub border or as a specimen. Purple and Pink.

## PRICES

Butterfly Bush

*Blooming shrubs add attractiveness and color*

# CLIMBING VINES

Ivy-covered Chimney

Vines are a very interesting part of the well-planted landscape. They have many uses and lend charm and beauty wherever used.

Perennial vines after they are once established, grow more vigorous each year. Woody vines, such as Wisteria and Fig Vine, grow to be quite old and often cover a large surface. For screening unsightly objects, for softening the lines of entrances and for covering pergolas in the garden, vines are almost indispensable.

## CORAL VINE

**CORAL VINE** (*Antigonon leptopus*). Often called Mexican Rose. A perennial vine which blooms freely from June until fall. Blossoms a very delicate pink, produced in racemes. A very desirable vine for the South. Fast grower.

Size	Each
Two-year, heavy, postpaid.....	\$ .50

## CLIMBING FIG

**FICUS PUMILA** (Sometimes catalogued *Ficus Repens*). This lovely evergreen vine clings very closely to any surface on which it climbs. Excellent on chimneys or masonry. Hardy south of the latitude of Montgomery, Ala.

Size	Each
4-inch pots, postpaid.....	\$ .75

## ENGLISH IVY

**HEDERA HELIX**. English Ivy, with its dark green leaves, is excellent for covering brick walls, stumps, or any location where it is desirable to have an evergreen vine. Often used as a ground cover.

Size	Each
4-inch pots, postpaid.....	\$ .75

## KUDZU

**KUDZU** (*Pueraria Thunbergiana*). An exceedingly fast growing vine. Suitable where one requires a vine for very quick shade; difficult, however, to keep from spreading. Best known and used most extensively as a hay crop. (See page 24.)

	PRICE	Each	10	1000
Roots .....	\$ .15	\$1.00	\$15.00	

## CONFEDERATE JASMINE

**TRACHELOSPERNUM JASMINOIDES** (also known as *Rhynchospermum Jasminoides*). The fragrance, in early Spring, of the starry white blossoms of Confederate Jasmine is long to be remembered. Evergreen; leaves dark green.

Size	Each
4-inch pots, postpaid.....	\$ .75

## YELLOW JESSAMINE

**CAROLINA YELLOW JESSAMINE** (*Gelsemium Sempervirens*). A hardy, woody twiner whose brilliant, tubular, yellow flowers are one of the first indications of the coming of Spring. Glossy evergreen foliage.

PRICE	Each
Open ground plants, postpaid.....	\$ .75

## TRUMPET CREEPER

**BIGNONIA RADICANS** (*Tecoma Smithii*). A hardy, vigorous, evergreen vine producing, in early Spring, numerous trumpet-shaped orange-red blossoms fully two inches across.

Each
2-year plants, postpaid.....

## WISTERIA

**WISTERIA SINENSIS** (Chinese Wisteria). Those who have visited Summerville, S. C., during Azalea time will never forget the lovely Purple Wisteria there, blooming in the top of pine trees 50 feet tall. Wisteria is one of the South's loveliest and showiest vines.

Each
2-year plants, postpaid.....

Chinese Wisteria

Write for prices on large specimen plants

## TRUMPET HONEYSUCKLE

**LONICERA SEMPERVIRENS.** A Hardy native climbing honeysuckle, producing very fragrant tubular flowers, colored pink to scarlet.

### PRICE

Open ground plants, postpaid.....\$ .35

## BAMBOO

The graceful branches and dainty foliage of the bamboos deserve a prominent place in every garden of the lower South. The clump sorts do not spread as rapidly as do some, and can be readily kept in bounds. For screens and windbreaks they are not surpassed by any other type of plants.

Bamboos will thrive in practically any type of soil if supplied plenty of plant food, and plenty of moisture, although the location must be well drained. Screen that undesirable view with bamboo.

**BAMBUSA ARGENTEA.** Grows 25-35 feet high. Its long, slender stems slightly drooping from the weight of the masses of deep green foliage, form one of the most graceful plants in the garden. The clump type so much in demand.

**BAMBUSA ARGENTEA STRIATA.** This variety is a variation of the above, having green stems striped yellow near the base, and with a white stripe down the green foliage. The variation is most pronounced in young plants.

Large clumps, 20 canes and over....\$2.50 and up  
Strong clumps, 12 to 18 canes..... 1.50 Each  
Small clumps, 6 to 10 canes..... 1.00 Each

**PHYLLOSTACHYS AUREA.** A running type of bamboo. Ultimate height is 30 to 40 feet. The leaves are an attractive light-green color. The canes make excellent fishing poles, and are used often here in harvesting pecans. Not recommended as an ornamental plant. Although of running type, it can easily be kept under control by digging up runners as they appear. Clumps \$1.00 each.

**PHYLLOSTACHYS BAMBUSOIDES.** (Timber Bamboo.) Another running type making very large canes. At the United States Experiment Station, near Savannah, it reaches a height of 60 feet. The foliage is large and quite attractive. Easily controlled by digging up runners as they appear. Clumps \$1.00 each.

## PALMS

**COCOS AUSTRALIS** (Hardy Cocos). Of the few palms which ever have a chance of surviving the winters of South Georgia and Alabama—even Northern Florida—the hardy Cocos Australis is outstanding as the most satisfactory. A very beautiful hardy palm with greyish-green, curved leaves.

### PRICES

1½ to 2 feet, from tubs.....	2.50

## GRASSES

**WINTER GRASS SEED.** We offer Italian Rye Grass Seed as the most satisfactory and economical grass seed for winter lawns. Should be planted in October and November, sufficiently early for the seed to come up and become established before real cold weather. One pound will sow approximately 200 square feet of lawn.

Trumpet creeper

Nothing adds greater beauty to the home grounds in winter, when so many things are bleak and bare, than a rich, deep green lawn of Italian rye grass. An excellent investment in good appearance.

### WIGHT'S "PERMA-LAWN" GRASS MIXTURE.

A mixture of several of the best lawn grasses for the lower South. This grass mixture is for fall and winter planting, and contains a grass seed which will come up immediately after planting, giving a beautiful winter lawn. The mixture contains Bermuda and Redtop grass seeds also, which will not germinate until Spring. These seed will begin to sprout when the winter grass begins to die and give a beautiful evergreen lawn for Spring and Summer. Thus with one sowing of seed you may obtain both a lovely winter lawn and a permanent Summer lawn. By planting winter grass seed each fall, one may then have a beautiful lawn, both Summer and Winter. Wight's PERMA-LAWN MIXTURE is the result of long testing of grass seeds for the South. Apply at rate of one pound to 150 square feet of lawn.

# PECANS—the South's Most Profitable Crop

## Pecans Add Value to Your Land

FOR the thoughtful, careful farmer or orchardist, the pecan still stands at the head of the list of profitable tree crops. Many owners of pecan trees have neglected their trees and wondered why they had not gotten good returns, but the careful grower who intelligently cares for his grove and gives them their proper requirements finds his pecan trees one of the most profitable investments he ever made.

The average farmer will still be content with growing cotton and corn, and his land will be worth no more after he has grown them for a hundred years. But the progressive farmer is looking for a crop that will increase the value of his farm land and give him larger returns each year that the farm is worked. For him a pecan orchard offers the solution.

We are in our forty-fourth year as growers of pecan nuts and pecan nursery stock. We have had wide experience in every phase of the industry. The knowledge gained from this experience is available to our customers. There is not sufficient space in this book to include it all here, but much information is available in pamphlet form which we will be glad to send you free on request. Simply check those items in which you are interested on the coupon attached.

## A Few Dollars Invested Now Means Independence Later

I know of no other thing offering such rich rewards, for which the initial investment is smaller. A comparatively few dollars invested now may bring your independence later.

Do you know that right now, throughout the pecan belt, there are individual trees that are worth from \$500 to \$1,000 each? The value is REAL for it is based on an 8 per cent annual income from these amounts. A tree yielding an average crop of \$50 worth of nuts, allowing \$10 for gathering and marketing, is well worth \$500, this being 8 per cent of that amount.

Suppose in later years that you have 50, 100, or more such trees—what will it mean to you? Make up your mind right now to enter this highly profitable field and let us help you to get started right!

*Plant Pecans for profit*

As this catalogue goes to press most of the pecan trees in this section are loaded with a fine crop of nuts. Many crops like cotton and tobacco are selling at less than the cost of production. To those who have pecan trees in bearing at this time, this season's crop of nuts will be a godsend. It may be that the abundant crop added to the stringency in the money market will cause a reduction in price over previous seasons. This may be true, and yet if it is remembered that when properly cared for a pound of pecan nuts can be grown as cheaply as a pound of cotton, then this season's abundant pecan crop will be a blessing. Though there may be only a few trees around the home, yet the nuts from these trees will help to pay taxes, insurance, and the like, and will be as money found in the proverbial "mule's track." Every home, though it be the humblest, should have at least a few pecan trees growing about the yard, garden and lot, which will not only add to the beauty of the surroundings, but will produce a revenue to add to the comforts of the family. If one cannot plant a good sized orchard, then every incentive should urge even the small landowner to set a few trees.

There is little danger of overproduction of pecans during the life of the present generation. The present production of pecans in the United States, if evenly divided between every person in the country, would give only about one-half pound to each person. As it is, barely more than one-half of the people of the United States know what a pecan nut is. It is further to be considered that when our people are provided, that we have the remainder of the world for a market.

Pecan Tree Showing Excellent Root System.

## Here Are Our VARIETIES and PRICES

Stuart Pecan

We are testing about forty of the most promising varieties of pecans. The following we consider among the best of these:

**FROTSCHER.** A large, thin-shelled nut, which has been widely planted. Placed by some at head of list of profitable varieties.

**MONEYMAKER.** An early and prolific bearer, and a healthy, vigorous grower. It is proving a very profitable commercial variety.

**MOORE.** Nut of medium size; a vigorous and healthy grower; very early and prolific bearer.

**NELSON.** This is probably the largest pecan grown. It is a strong, vigorous grower, and an early and abundant bearer. Thick-shelled.

*Wight-grown trees give better results*

## PECANS—Continued

**PABST.** A safe nut to plant. While not quite as large as some of the above, it is a good bearer and one can hardly make a mistake in setting it.

**SCHLEY.** This variety is placed by some at the head of the list. It is a large, thin-shelled nut of fine flavor, and is well filled with meat. Liable to scab near the coast.

**STUART.** An old favorite that has been widely tested. This is a variety that can be planted with safety and succeeds over a wider territory than probably any other kind.

**SUCCESS.** This is a pecan of fine flavor. Originating in Mississippi, it has been widely disseminated during the last few years.

This orchard was twelve years old when photographed, and bore last year when 15 years old, 1240 pounds of nuts per acre.

## CROTALARIA SPECTABILIS

*Crotalaria Spectabilis* being disced under, Sept. 15.

We have secured a limited quantity of these seed and offer them for the first time. This is the most promising plant we have as a soil renovator. Easy to grow, requires no inoculation, and makes an immense amount of vegetable matter to be turned under for soil improvement. The following speaks for itself:

### TABLE SHOWING VALUE OF THE DIFFERENT COVER CROPS

(Prepared by the Florida Agricultural Experiment Station)

Crop	Dry Wt. Yield in tons. (3-yr. Av.)	Percent of Nitrogen	Lbs. of Nitrogen per Acre	Equiv. in Nitrate of Soda per Acre
Crotalaria .....	2.89	2.446	141.378	885 lbs.
Cow Peas .....	1.10	2.015	44.330	277 lbs.
Velvet Beans .....	.85	2.208	37.536	232 lbs.
Beggardweed .....	.62	1.443	17.890	112 lbs.

Prices of seed are as follows:

1 to 10 lbs., 60c per lb. f. o. b. here

10 to 50 lbs., 50c per lb. f. o. b. here

50 to 100 lbs., 40c per lb. f. o. b. here

100 to 1000 lbs., 35c per lb. f. o. b. here

Terms—Cash when shipped, or C. O. D. Add postage when sent by mail.

Three to four pounds of seed are sufficient to plant an acre. In the past the demand for seed has been greater than the supply. *Crotalaria* is sure to play a very important part in future agricultural development. Plant from April to June. Seed ready about January 1st.

*Plant Pecan trees for beauty and profit*

*Crotalaria Spectabilis Being Disced Under, September 15.*

---

## JAPANESE PERSIMMONS

For a number of years the Japanese Persimmon has been gaining in popularity. It has been grown in the cotton belt sufficiently long to show that it is well adapted practically all over the belt, at least where the native persimmon thrives. In recent years it has become better known in the Northern and Eastern mar-

kets and has commanded very attractive prices wherever it was offered. Leading orchardists in the South are recognizing its possibilities and the chances are that within a few years Japanese Persimmons will be known and marketed in all the leading cities of this country.

Some varieties of Japanese Persimmons, under

*Block of One-Year Japanese Persimmons*

*Use fruit trees in the home garden*

certain conditions, are self-pollenizing, but it has been found advisable to plant among the other varieties, the staminate variety called Gailley. One tree of this variety to ten trees of the other varieties will insure good pollenization and fruit will grow on to maturity.

We have the prettiest block of one-year persimmon buds we have ever seen offered anywhere. Straight, vigorous trees, many of which will grade 6 to 8 feet in height. Such trees should grow off promptly when transplanted to your orchard.

**FUYUGAKI.** A recent introduction from Japan. Tree vigorous, upright grower; fruit medium to large, nearly round, but somewhat flattened; skin smooth, tough; color reddish yellow. Flesh meaty and of exceptionally good flavor. Bears young. Non-astringent; can be eaten while still hard; may be peeled and eaten like an apple.

**TAMOPAN.** A Chinese variety of special merit. Fruit is large, somewhat flattened and with a compressed ring around it as though a string had been tied around the fruit while growing. Color beautiful golden red; skin quite thick and tough.

**TANE NASHI.** The best-known and probably the most popular variety. Large to very large, roundish, conical, pointed; skin light yellow, changing to deep red. Quality very fine. The leading market variety.

**GAILEY.** Recommended for its staminate flowers for pollenizing and not for its fruit. Fruit small, color dull red; flesh dark about the seeds, meaty, juicy. Should be in every planting.

**TANE NASHI PERSIMMON**

Our plants are far superior to those handled by department stores and ten-cent stores. They are carefully grown for a clientele that requires the best in nursery stock. No plant is dug until an order is received for it. They are not subjected to the drying out that is bound to occur in heated department stores. Well grown—freshly dug—carefully packed, Wight's trees are always the best.

"Trees came through in good condition, and are up to grade—plus.

*We will help you plan your fruit trees*

## TUNG OIL TREES *are Ornamental and Profitable*

**ALEURITES FORDII.** The Chinese tung oil tree was introduced into this country from China by the U. S. Department of Agriculture about 25 years ago. It has shown its adaptability to the soil and climate of southern Georgia, Alabama, Mississippi and Louisiana, and to the greater part of Florida. It is valuable for its oil which is used in paints, varnishes and lacquers, and in a rapidly increasing number of commercial products. There is a great demand for the oil, millions of dollars being paid to China every year for it.

The tree, shown above, set in 1908, has a spread of top of 36 feet, and a circumference three feet above the ground of 61½ inches. It has averaged 200 pounds of nuts per year for the last five years.

The tree is a rapid and healthy grower. It is easily transplanted and begins to bear the second or third year after transplanting. It comes into profitable bearing in four to five years. It is adapted to any soil that will produce cotton or corn successfully

Tung Oil Tree in its Second Summer. Has About 40 Nuts on it.

*An orchard is a great asset*

where the temperature does not go below 10 to 15 degrees F. As a shade tree it is valuable, being a rapid and symmetrical grower.

Owing to the very great demand for the oil, the tung oil tree is attracting very wide attention in the territory to which it is adapted. Hundreds of thousands of trees have been set during the last year or two. It seems destined to become a most important addition to the list of our profitable crops. Every one who has the land should set at least a few of these trees.

During the last season there have been wonderful developments in the tung oil situation. In Grady County, Georgia, alone, of which Cairo is the county site, 200,000 trees were set during the winter of 1930-31. During the coming winter this will be increased by an almost equal amount of trees. Other sections are also taking a strong hold of the situation. Now is the time to get in on the "ground floor" with this most promising development.

The principle tung oil territory is a strip of land lying mainly along the Atlantic Coast of South Carolina and Georgia, and thence along the Gulf of Mexico. This favorable strip is about 250 to 300 miles wide, extending from a little south of the latitude of Macon, Ga., on the north, to middle Florida on the south. The experience of the present year goes to show that South Georgia and North Florida are especially favorably located for the production of tung oil. Crops in this territory at the present time (September, 1931) are abundant; and there is no crop that under present conditions is more promising for a further diversification for our farm operations. The crop virtually gathers itself, as the nuts will remain without deterioration on the ground until other crops are gathered, when they may be picked up and marketed at leisure.

Trees that are well cared for will at eight to ten years of age yield two tons or more of dry nuts per acre. These nuts are readily salable at from \$40.00 to \$50.00 per ton. When the easiness and economy with which this crop may be produced is considered, there is not a more promising crop that can be grown by our landowners. A few trees will enable one to test it out; a larger number will, in a few years, add to the economic independence of the grower.

Our trees are the best, and are well grown from good seed. These prices are made exceptionally low so as to enable every one to secure at least a few of these trees.

The following are prices for tung oil trees f. o. b. Cairo:

	10	100	1000
4-6 feet .....	\$2.50	\$20.00	\$150.00
2-4 feet .....	2.00	15.00	125.00

Photo made July 24, when trees had 2½ months more to grow.

**No pests attack Tung Oil trees**

# CITRUS FRUITS

Only a short time ago it was thought that citrus fruits could not be grown outside of the tropical or semi-tropical zones. With the successful introduction of the Satsuma orange to this country, the area in which citrus fruits can be profitably grown has been gradually spreading, so that now many citrus fruits are grown where it was once thought impossible. In our orchards here at Cairo, we have producing orchard trees of Satsuma Orange, Grapefruit, Kumquat, Meyer Lemon, and Citrangequat. Although Cairo is near the northern limit of the zone in which they can be profitably produced, we have a small grove ten years old which has demonstrated fully that Satsumas may be grown commercially here. Northern and Western Florida, Southern Georgia, Southern Alabama, and the section along the Gulf Coast offer great possibilities in the production of this valuable citrus crop.

**OWARI SATSUMA.** Our Satsuma orange trees are of the Owari variety, the one best suited to conditions in this country. We use as a root stock the hardy orange, CITRUS TRIFOLIATA. Satsumas should come into bearing the third year, and into commercial production the fifth year.

**SATSUMA ORANGE (C. nobilis owari).** The Satsuma is the hardiest of the oranges and has all the good qualities of the best California and Florida oranges. It begins bearing very young and is the most prolific of all varieties. Aside from the fact that it is easily grown, it has the advantage of being the most deliciously flavored and attractive of the citrus fruits. The flesh is tender, juicy, fine grained, sweet and delicious with a peculiarly agreeable flavor found in no other orange. This orange is entirely seedless, and this fact, together with the ease with which it is peeled, makes it very pleasant to eat. Every one with available space should grow Satsumas. They ripen early in October through November, thus they are subject to little competition from other varieties. Aside from their advantages as a commercial fruit, these oranges can be produced most satisfactorily in the backyard, and furnish delicious fruit to the family in the early winter weather when that class of foods is so desirable and so high priced.

**DUNCAN GRAPEFRUIT.** This is the hardiest variety being produced extensively at this time. It is not, however, quite so resistant to the cold as the Satsuma orange. The fruit has a very excellent flavor, is medium to large, fine quality and has a very attractive appearance. Ripens early in December. Tree a heavy bearer.

**KUMQUAT.** This is the smallest of the edible citrus fruits grown in the northern part of the citrus-growing region. The Kumquat is a sweet-skinned orange which is very delicious and makes a very choice fruit for desserts, jellies, jams, preserves, pickles and marmalades. Aside from this, the yellow-gold fruit on the small evergreen tree makes a beautiful sight, and the tree is therefore valuable as an ornament. These trees are very hardy, bear enormous yields and never miss a crop; in fact, they bear the first season after setting. The fruit is readily marketable.

We have a beautiful lot of kumquats in boxes. These plants have a nice crop of fruit set, which will mature about the middle of November. You will get a lot of pleasure out of these trees as house plants. They can then be set in the yard after they have been used as house plants. \$2.00 each, postpaid.

2 year, bare root.....	\$ .75	\$7.00	\$60.00
1 year, bare root.....	.50	4.50	40.00

# BLUEBERRY

**BLUEBERRY.** A native of the South, the blueberry has, in recent years, been grown commercially in North Florida. The fruit is medium to large, a dark purple color, and begins ripening about June 1st. The ripening season extends through June and July into August. The bush is symmetrical, with a rich green foliage which makes it desirable either in the vegetable garden or the shrub border. Our plants have been observed over a period of several years, and are good producers.

Size	PRICE	Each	10
One-year plants, postpaid.....	\$ .20		\$1.75

# YOUNGBERRY

**YOUNGBERRY.** Far superior to any berry of its type which we have tested. The Youngberry originated in Louisiana 25 years ago, as a cross between the Phenomenal Berry and the Mayes-Austin Dewberry. Just recently it has been widely disseminated and its true value realized. It is said that the Youngberry has revolutionized berry culture in California. The berries are large to very large, with very large grains. The seed are quite soft, so that they may almost be considered seedless. The color is a dark purple, changing as the fruit becomes full ripe to a jet black. The berries keep well and are proving excellent shippers. The vines are vigorous and should be trained on trellises. Plant six to seven feet apart in rows eight to nine feet apart. We recommend this new fruit highly as worthy of a place in every garden. Ripens early, producing berries over a period of several months. Strong rooted tips, postpaid 20c each, \$1.75 per ten.

# APPLES

**DELICIOUS.** A remarkably popular variety in the West. Fruit large, nearly covered with dull, dark red; fine grained, crisp, juicy; quality best.

**HORSE.** Large, green, acid. Good for cooking and drying. A productive variety, bearing in July and August.

**RED JUNE.** Medium, conical; deep red and very juicy. A productive variety, bearing from June 15th to end of July.

**WINEAP.** Small to medium; red, vinous, quality very good. A good keeping apple.

**YATES.** Small dark red, dotted with small white dots; flesh yellow, firm, juicy and aromatic. A heavy bearer and good keeper.

Home grown fruit tastes better

## GRAPES

Commercial vineyards of bunch grapes for supplying the local market have proven quite profitable in many parts of the South. Although the bunch grape is not native of the South, with proper care it gives excellent results. Vines should be planted 8 to 10 feet apart and trained on a three-wire trellis.

**CONCORD.** Blue-black, vigorous grower and heavy bearer. One of the old favorites.

**DELAWARE.** Small to medium sized bunches of small pink berries; in quality one of the best.

**NIAGARA.** Large bunches of good sized white berries; an attractive market variety.

### PRICES

Size	Each	10	100
2 year, postpaid .....	\$ .35	\$3.00	\$25.00
1 year, postpaid .....	.25	2.00	15.00

The Muscadine group of Grapes is native to the South and an old favorite. They are well adapted to soil and climate and need no introduction to the South. Muscadine vines are generally trained on overhead trellises, and are spaced 20 to 25 feet apart each way.

**SCUPPERNONG (Muscadine).** Well known in the South. Large berries, seldom more than eight or ten in a cluster. Brown, thick-skinned, pulpy fleshed. Very vinous, sweet and has a peculiar musky aroma. This grape is a regularly bearing variety and the vine is disease-resisting and free from insect depredations. Fruit has never been known to decay before maturity. Very prolific.

**THOMAS.** Fruit extra large, borne in clusters like Scuppernong. Color purple, thick skin. Fruit has a peculiar tang which is very delightful. A very desirable arbor grape.

### PRICES

Size	Each	10	100
No. 1 .....	\$ .35	\$3.00	\$25.00

## PEARS

The number of varieties of pears that can be satisfactorily grown in the South has been greatly reduced in recent years due to the high susceptibility of most varieties to blight. No spray has been developed which is effective in controlling blight, so that the only control method now recommended is pruning out diseased limbs. The chief effort in pear culture lately has been the introduction of blight-resistant varieties. A number of these are being tested now. Many of them may prove valuable.

**BALDWIN.** A new pear, originating in Baldwin County, Alabama, and said to be blight resistant. Good flavor, vigorous grower, ripening in August. A decidedly superior fruit to any other blight resistant varieties tested here. A new introduction which is unusually promising. Supply limited. Price of Baldwin 75c each.

**PINEAPPLE.** The pineapple pear's blight-resistant qualities make it in great demand as an orchard tree in the South. A very vigorous grower and unusually heavy and regular bearer. The fruit is large and attractive; flesh coarse, juicy. Its quality is very similar to that of the Keiffer. Although not recommended for eating raw, it makes an excellent canning and preserving pear. Ripens during July and August.

**KEIFFER.** Fruit large to very large. Skin yellow, flesh brittle and juicy. Good quality fruit maturing in September and October. Trees vigorous and prolific.

### KUDZU FOR HAY

Kudzu is fast becoming the leading hay crop in the lower South. After it once becomes established, it requires no cultivation whatever. The vines will cure and be ready for baling in less than twenty-four hours after cutting. Planted in 15-foot drills, three feet in the drill, it requires between 800 and 900 roots to plant an acre. Such a plan leaves room for two rows of corn or other crop to be planted between the kudzu rows, so that a crop can be made at the same time the kudzu is cultivated. The following year plant only one row of corn. By the third season the kudzu will have become well established and a good crop of hay can be cut.

Price per 1000 roots.....\$15.00

Excellent results from our fruit trees

## PLUMS

Recent plum crops demonstrated the fact that plum culture in the South offers wonderful opportunities for profit. The plum bears young and regularly, is about the most productive of the fruits, and very easy to grow. The increasing popularity of this fruit, both in the fresh state and for commercial preserving purposes, enables the grower to market plums readily and at fancy prices in Northern and Southern markets. The demand for plums for refrigerator car shipments is increasing and commercial plum growing offers itself as an enterprise both profit and pleasure producing.

Plum trees should be planted 15 to 25 feet apart each way and can be used, if desired, as a filler in an orchard between permanent trees. It is desirable to plant plums in poultry yards as the nitrogenous fertilizer furnished by the chicken manure seems to be just what the trees need; also the fowls clean up the curculio that attacks the fruit.

**BURBANK.** Very large, clear rich red, showing yellow dots. Flesh deep yellow, firm and meaty.

**DAMSON** (Shropshire Damson). Fruit dark purple, of medium size. Tree very productive. A good preserving variety.

**RED JUNE.** Vigorous grower. Prolific. Medium to large. Deep vermilion red, showy. Flesh light lemon yellow, slightly sub-acid. June.

**WICKSON.** Very large, deep maroon-red; popular Japanese variety; flesh very firm, yellow, cling, sub-acid, rich. An excellent variety, but too often a shy bearer.

**KELSEY JAPAN.** Very large heart shaped, greenish yellow, sometimes spotted red. Vigorous grower, prolific bearer, good quality. July.

### PRICES

4 to 5 feet, postpaid.....	\$.60	\$5.50	\$45.00
3 to 4 feet, postpaid.....	.50	4.50	35.00

**WINESAP.** A recent introduction which is growing rapidly in favor wherever it is known. A very thrifty grower. It is not uncommon for trees in the nursery row to make eight to ten feet of growth the first year after budding. Fruit deep red when half ripe, blending into dark purple as it ripens. Juicy; cling; very large; some specimens reach a diameter of 2½ inches. Sweet-acid when ripe with slight tang, not at all unpleasant in the ripe fruit. One of the best keepers and shippers. July 1st to 15th.

## FIGS

**A** TRULY Southern fruit of high quality which cannot be grown in the North. This fruit is found almost universally in home plantings in the South. Figs are delicious for eating both fresh and preserved.

Fig trees may be planted as close together as 10 to 12 feet, and require very little cultivation. Cultivation should always be shallow as the roots are close to the surface. Figs seem to do best when their roots can run under buildings. Both varieties we list are very hardy.

**BROWN TURKEY.** Medium to large; yellowish brown; pulp tender, rich and of the finest quality. Fruit borne on long stems, allowing fruit to hang blossom end down at maturity, preventing souring in rainy weather.

**CELESTE.** Fruit is of medium size; color pale violet, thin skin and firm flesh. Juicy, rich and sweet. Tree strong grower and reliable bearer. Hardest of all the Figs.

## PEACHES

### Southland's Leading Fruit

**T**HE peach has long been a favorite orchard fruit of the South. It matures quicker than other fruit and comes into commercial bearing comparatively early. Its large range of varieties makes it possible to have fruit ripening over a long period of time in the same vicinity.

Every farmer and home-owner should have at least a few trees. Often a small orchard of four or five acres will prove quite profitable for supplying your home market, even near very small towns. The peach is a popular "filler" crop to be grown in pecan orchards before the pecan trees come into commercial production.

Peaches will grow over a wide territory of the South. Of the many varieties of peach trees, we have selected and are listing those proving most satisfactory over the largest territory in the South. They give a long fruiting period in practically any territory suited to peach culture.

Peaches have one requisite wherever they are grown—they must be planted on well-drained soil. Varieties are listed in order of ripening.

#### SOME HINTS FOR THE CULTURE OF PEACHES

Plant one-year-old trees about 18 x 18. Prune severely, cutting back 18 to 24 inches to form a balanced, low, and compact head. The following Spring cut away all but three well distributed branches. The annual pruning should consist of cutting off about one-third of the last year's growth. Don't let the branches get too long as their weight will split the tree trunk. Dehorning is done only when there has been a bad winter freeze.

**MAYFLOWER.** Earliest peach known, although a late bloomer. Medium size, entirely covered with red. Good shipper. May 15th to June 1st.

## FRUITS

### for the Home

#### OUR TREES ARE SURE TO GROW

If planting directions are followed and proper attention and care given, our trees usually grow. Great care is taken to send out only strong, vigorous, well-rooted trees. The varieties we send are true to name. Only strong, vigorous stocks are used for propagating purposes. Scions are taken from our own trees which may be seen growing and fruiting in our groves. Start right with trees from Wight!

**EARLY ROSE.** Because of its excellent keeping and shipping qualities, this is an important and very desirable early peach. Medium size, highly colored. May 20th to June 10.

**HILEY.** Large, red cheeks, flesh white, red at pit. Freestone. June 20th.

**CARMAN.** Large, creamy-white, tinged red. Freestone. June 20th.

**GEORGIA BELLE.** Large, showy, clear, creamy-white, tinted red. Flesh white and firm. Excellent quality. Freestone. July 1st to 15th.

**ELBERTA.** Probably best known of all peaches. Very large; yellow skin with red cheek. Flesh yellow and juicy. No orchard should be without this variety. Middle of July.

**EARLY CRAWFORD.** An early yellow-fleshed peach. A very handsome variety with yellow skin, having a dark red blush. Quality unsurpassed, a good Peach for market or home orchard. Tree large and vigorous, bearing in early September.

## LANDSCAPE SERVICE

We are very glad to be able to offer to our clients the services of our men experienced in planning and designing plantings for the small home.

Send us the dimensions of your grounds, the outside measurements of the house, the location of fences, trees and other permanent objects (these can be best shown by a rough sketch of the building and grounds), and we shall be glad to make you a drawing suggesting arrangement of landscape and the proper plants to use in each location. If possible, send a small photograph of the building.

We require a deposit of \$10.00 before starting the sketch, the money to be credited to your account toward the purchasing of nursery stock for the planting. Should you not make the planting, the money will go to us to defray the expense of the drawing.

Here is an excellent opportunity to have a real set of landscape plans drawn for your particular lot without the least additional cost to you. Hadn't you rather have your foundation planting, your entrance walks and drives, your rose garden and your outdoor living room planned by experienced landscape men, **before you set a single plant**, than to plant haphazardly, without any idea how the final result will look? And remember, this service costs you nothing—you simply pay for the plants themselves.

### A Typical Southern Plan

## **25% REDUCTION**

Since printing our 1931-'32 Catalogue and Price List—which is considerably lower than ever before—in order to encourage the continuation of planting ornamentals, fruits, nuts, etc., through this period of depression, we further reduce our prices **TWENTY-FIVE PERCENT**, effective November 1st.

Paste this on your catalogue, or if you have misplaced it write for another.

WIGHT NURSERY ORCHARD CO.

CAIRO GA.

ORDER BLANK FOR SATSUMA ORANGES.

We have an excellent crop of Satsuma oranges on our groves here at Cairo. Satsumas are considered by many the finest of the citrus fruits. They have thin skins and can easily be peeled without a knife. The fruit is sweet and very juicy. All fruit is tree-ripened, so that it has the full flavor of the orange, and packed by our own experienced packers.

Order a box of this delicious tree-ripened fruit. It makes a very acceptable gift to anyone. Shipments start about October 25th and end about December 10th. Use the order blank below.

PRICE - \$2.60 per half-strap-- FOB Cairo. Ga.  
A half-strap contains from 160 to 200 oranges.
